

Aranda™

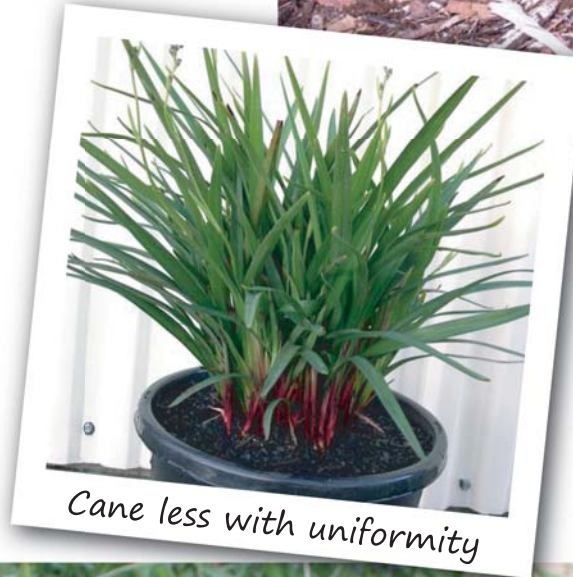

Dianella caerulea 'DC 150' 

Ideal as a tiny border plant with a clean, neat appearance in the landscape.

Aranda is a compact, dwarf, cane less Dianella with upright to slightly arching deep green foliage and has very tight rhizome growth with a small spread. Aranda has a more or less clumping habit. It has smooth deep green semi gloss, gently arching foliage. It flowers in spring and summer with deep blue coloured flower buds and star shaped flowers held among to slightly above the foliage, this is followed by purple berries. Grows in full sun to 70% shade and grows well in coastal humidity and inland climates. Full frost tolerance yet to be tested. It has shown evergreen frost hardiness to -5°C in Windsor, NSW, with only some leaf discolouration.

Tightly held rhizomes

Cane less with uniformity

Aranda thrives in sandy loam, clay loam, free draining soils. It performs exceptionally in improved garden soils. It has no problems with any well composted, processed mulch type. Ideal as a tidy border plant, with a clean neat appearance in the landscape. Also a very compact plant for mass planting. It has tightly held rhizomes.
