# Chocomint Mist™

Phormium tenax 'PHOS4' (PBR)

## An ultra compact Phormium with minty green and chocolate brown foliage

Chocomint Mist is a unique Phormium tenax with mouth-watering foliage. It boasts minty green foliage mixed with chocolate brown. It is an excellent plant for VIC, SA, WA, Tasmania and southern NSW. In humid areas such as Sydney, this ultra compact Phormium should be planted around March to October for the best results. It grows well in full sun to shady positions and handles most soil conditions. Chocomint Mist tolerates heavy frost and moderate dry conditions. Ensure it isn't planted with the crown of the plant below soil level, as it will not thrive as good as it should. Chocomint Mist is ideal for mass planting for low borders or as a fill in plant because of its compact form. It is also good for containers and patio pots.

FOLIAGE
