

Savanna Blue™

Lomandra filiformis 'LMF500' (PBR)

Savanna Blue's striking blue foliage creates superb colour and texture contrast throughout the garden.

Savanna Blue has stunning form and foliage. It creates great contrasting colours with many plants due to its unique blue look. Savanna Blue will perform well in mass planted areas and specimen gardens. Areas that suit Savanna Blue include Tasmania, WA, SA, VIC and NSW. It is suitable for south east QLD if planted in the cooler months, in sheltered spots. Savanna Blue is

suitable for a wide variety of soil conditions. Its low height, excellent drought tolerance and the fact that it rarely, if ever, needs trimming makes it a winner.

It is ideal for mass planting in garden beds and borders. Planted on mass it provides an excellent ground cover. Its blue foliage contrasts nicely against the green, yellow and red tones of the other plants. An ideal plant for smaller, modern gardens. Once established, this plant should require low to no irrigation. In severe drought or very dry climates, additional watering will improve the appearance of the plant.

A winner in the drought war

DESCRIPTION	Compact, ornamental, blue <i>Lomandra filiformis</i>
HEIGHT & WIDTH	30cm x 30cm
POSITION	Full sun or part shade. Tolerates cold and heat
CARE	Low maintenance once established
USES	Mass plantings. Specimen gardens
