

Utopia®

Dianella prunina 'DP303' (PBR)

The best features of Utopia are not only that its foliage looks amazing, but its flower stems are beautifully unique.

This Dianella prunina is absolutely stunning and will complement other plants in the Foliage First Range. Utopia will be an attractive feature for all gardens adding thrilling colours to any landscape.

Stunning contrasting flowers

Utopia prefers good draining soils or raised gardens in heavier soils. Utopia has stunning contrasting colours amongst its foliage, which sporadically twists and turns providing a unique look for gardeners and landscapers. Utopia adds a unique colour perspective to the landscape and is very hardy, drought and frost tolerant. It will need older foliage removed every one or two years. Fertilise with a slow release fertiliser after two months, and then only if required. Trim older foliage when required. Once established do not over water. Maintenance issues may make large mass plantings unviable.

FOLIAGE
FIRST
RANGE

DESCRIPTION	Blue and purple foliage
HEIGHT & WIDTH	50cm x 50cm
POSITION	Full sun to part shade
CARE	For better foliage specimen, remove flower stems as required
